

Problem 1: Read the instructions carefully and answer accordingly. If there is any need to insert some data then do that as well.

a) Navigate and List:

a. Start by navigating to your home directory and list its contents. Then, move into a directory named "LinuxAssignment" if it exists; otherwise, create it.

Step 1: Navigate to the Home Directory use the command:

```
cd ~
```

Step 2: To list the Contents of the Home Directory use the command:

```
ls
```

Step 3: Check if the "LinuxAssignment" Directory is Exist

```
ls LinuxAssignment
```

If the directory exists, its contents will be listed. If it doesn't exist, an error message will be displayed.

Step 4: Create the "LinuxAssignment" Directory if it Doesn't exist create it using the mkdir command:

```
mkdir LinuxAssignment
```

Step 5: Move into the "LinuxAssignment" Directory using the cd command:

```
cd LinuxAssignment
```

Now you should be inside the "LinuxAssignment" directory, ready to perform further tasks.

Output:

```
~/LinuxAssignment
Admin@DESKTOP-OEUSPON ~
$ cd ~

Admin@DESKTOP-OEUSPON ~
$ ls
LinuxAssignment

Admin@DESKTOP-OEUSPON ~
$ ls LinuxAssignment

Admin@DESKTOP-OEUSPON ~
$ mkdir LinuxAssignment
mkdir: cannot create directory 'LinuxAssignment': File exists

Admin@DESKTOP-OEUSPON ~
$ cd LinuxAssignment

Admin@DESKTOP-OEUSPON ~/LinuxAssignment
$
```

b) File Management:

a. Inside the "LinuxAssignment" directory, create a new file named "file1.txt". Display its

contents.

Step 1: Create a New File Named "file1.txt" use the touch command:

```
touch file1.txt
```

Step 2: Insert Data into the file use a text editor like nano:

```
nano file1.txt
```

Insert some text, for example:

```
"Hello, World!
```

```
This is file1.txt inside the LinuxAssignment directory."
```

Step 3: Display the Contents of the file use the cat command:

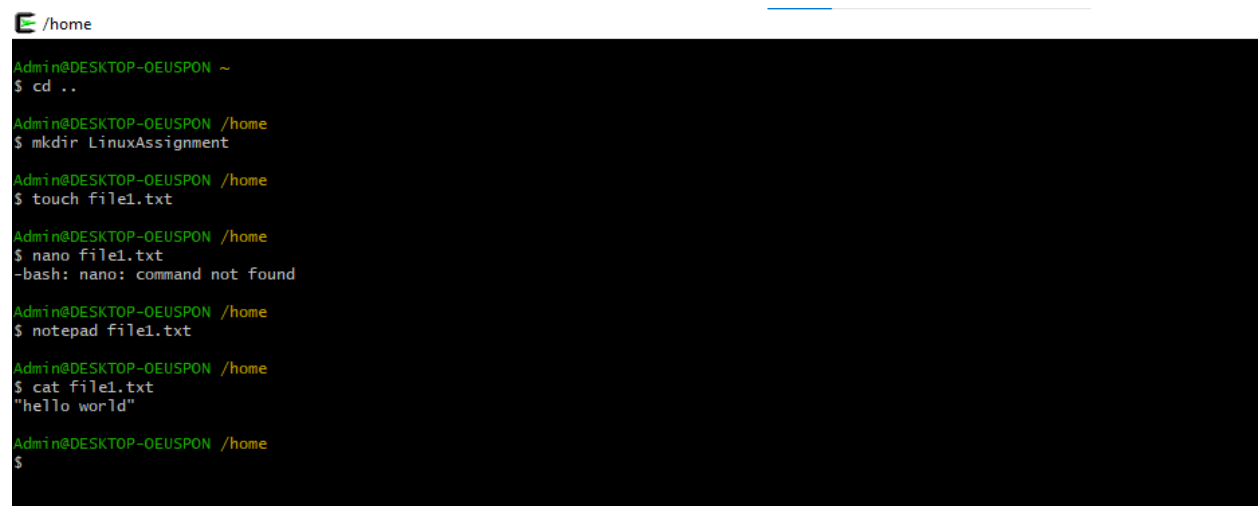

```
cat file1.txt
```

This will display the contents of the file:

```
"Hello, World!
```

```
This is file1.txt inside the LinuxAssignment directory."
```

Output:

A terminal window with a black background and green text. The prompt is 'Admin@DESKTOP-OEUSPON ~'. The user enters '\$ cd ..'. The prompt changes to 'Admin@DESKTOP-OEUSPON /home'. The user enters '\$ mkdir LinuxAssignment'. The prompt changes to 'Admin@DESKTOP-OEUSPON /home'. The user enters '\$ touch file1.txt'. The prompt changes to 'Admin@DESKTOP-OEUSPON /home'. The user enters '\$ nano file1.txt'. The terminal shows '-bash: nano: command not found'. The user enters '\$ notepad file1.txt'. The prompt changes to 'Admin@DESKTOP-OEUSPON /home'. The user enters '\$ cat file1.txt'. The terminal shows '"hello world"'. The prompt changes to 'Admin@DESKTOP-OEUSPON /home'. The user enters '\$'.

```
Admin@DESKTOP-OEUSPON ~  
$ cd ..  
  
Admin@DESKTOP-OEUSPON /home  
$ mkdir LinuxAssignment  
  
Admin@DESKTOP-OEUSPON /home  
$ touch file1.txt  
  
Admin@DESKTOP-OEUSPON /home  
$ nano file1.txt  
-bash: nano: command not found  
  
Admin@DESKTOP-OEUSPON /home  
$ notepad file1.txt  
  
Admin@DESKTOP-OEUSPON /home  
$ cat file1.txt  
"hello world"  
  
Admin@DESKTOP-OEUSPON /home  
$
```

c) Directory Management:

a. Create a new directory named "docs" inside the "LinuxAssignment" directory.

Step 1: Create a New Directory Named "docs"

To create a new directory named "docs", use the mkdir command

```
mkdir docs
```

verify that the directory has been created by listing the contents of the "LinuxAssignment" directory:

ls

This should display the newly created "docs" directory:

file1.txt

docs

Now you have created a new directory named "docs" inside the "LinuxAssignment" directory.

Output:

A terminal window with a black background and green text. The prompt is 'Admin@DESKTOP-OEUSPON ~'. The user enters '\$ mkdir docs'. The prompt changes to 'Admin@DESKTOP-OEUSPON ~'. The user enters '\$ ls'. The output is 'LinuxAssignment docs file1.txt'. The prompt changes to 'Admin@DESKTOP-OEUSPON ~'. The user enters '\$ |'.

```
Admin@DESKTOP-OEUSPON ~  
$ mkdir docs  
  
Admin@DESKTOP-OEUSPON ~  
$ ls  
LinuxAssignment docs file1.txt  
  
Admin@DESKTOP-OEUSPON ~  
$ |
```

d) Copy and Move Files:

a. Copy the "file1.txt" file into the "docs" directory and rename it to "file2.txt".

Step 1: Copy the "file1.txt" File into the "docs" Directory and Rename it to "file2.txt"

To copy the "file1.txt" file into the "docs" directory and rename it to "file2.txt", use the cp command:

cp file1.txt docs/file2.txt

This command copies the "file1.txt" file into the "docs" directory and renames it to "file2.txt".

You can verify that the file has been copied and renamed by listing the contents of the "docs" directory:

ls docs

This should display the newly copied and renamed "file2.txt" file:

file2.txt

Now you have copied the "file1.txt" file into the "docs" directory and renamed it to "file2.txt".

Output:

```
Admin@DESKTOP-OEUSPON ~  
$ cp file1.txt docs/file2.txt  
  
Admin@DESKTOP-OEUSPON ~  
$ ls docs  
file2.txt  
  
Admin@DESKTOP-OEUSPON ~  
$
```

e) Permissions and Ownership:

a. Change the permissions of "file2.txt" to allow read, write, and execute permissions for the owner and only read permissions for others. Then, change the owner of "file2.txt" to the current user.

Step 1: Change the permissions of "file2.txt" use the chmod command:

```
chmod 740 docs/file2.txt
```

This command sets the permissions of "file2.txt" to:

- 7 (rwx) for the owner (read, write, and execute)
- 4 (r--) for the group (read only)
- 0 (---) for others (no permissions)

Step 2: Change the Ownership of "file2.txt"

To change the ownership of "file2.txt", use the chown command:

```
bash
```

```
chown $USER:$USER docs/file2.txt
```

This command changes the owner and group of "file2.txt" to the current user.

You can verify the changes by using the ls -l command:

```
bash
```

```
ls -l docs/file2.txt
```

This should display the updated permissions and ownership:

```
bash
```

```
-rwxr---- 1 <current_user> <current_user> ... file2.txt
```

Output:

```
~/LinuxAssignment/docs
Admin@DESKTOP-OEUSPON ~
$ cd LinuxAssignment

Admin@DESKTOP-OEUSPON ~/LinuxAssignment
$ ls
docs

Admin@DESKTOP-OEUSPON ~/LinuxAssignment
$ cd docs

Admin@DESKTOP-OEUSPON ~/LinuxAssignment/docs
$ ls

Admin@DESKTOP-OEUSPON ~/LinuxAssignment/docs
$ touch file2.txt

Admin@DESKTOP-OEUSPON ~/LinuxAssignment/docs
$ ls
file2.txt

Admin@DESKTOP-OEUSPON ~/LinuxAssignment/docs
$ chmod 704 file2.txt

Admin@DESKTOP-OEUSPON ~/LinuxAssignment/docs
$ ls -l
total 0
-rwx---r-- 1 Admin None 0 Feb 27 21:18 file2.txt

Admin@DESKTOP-OEUSPON ~/LinuxAssignment/docs
$ |
```

```
~/LinuxAssignment/docs
Admin@DESKTOP-OEUSPON ~/LinuxAssignment/docs
$ chown $(whoami) file2.txt

Admin@DESKTOP-OEUSPON ~/LinuxAssignment/docs
$ ls
file2.txt

Admin@DESKTOP-OEUSPON ~/LinuxAssignment/docs
$
```

f) Final Checklist:

a. Finally, list the contents of the "LinuxAssignment" directory and the root directory to ensure that all operations were performed correctly.

Step 1: List the Contents of the "LinuxAssignment" Directory

To list the contents of the "LinuxAssignment" directory, use the ls command:

bash

ls

or

bash

ls LinuxAssignment

This should display the contents of the "LinuxAssignment" directory:

file1.txt

docs

Step 2: List the contents of the "docs" directory use the ls command:

bash

ls docs

This should display the contents of the "docs" directory:

file2.txt

Step 3: List the contents of the root directory use the ls command with the / path:

ls /

This should display the contents of the root directory:

bin

boot

dev

etc

home

By completing these steps, you have verified that all operations were performed correctly, and the "LinuxAssignment" directory and its contents are in the expected state

Output:

```
Admin@DESKTOP-OEUSPON ~  
$ cd LinuxAssignment  
  
Admin@DESKTOP-OEUSPON ~/LinuxAssignment  
$ cd docs  
  
Admin@DESKTOP-OEUSPON ~/LinuxAssignment/docs  
$ ls -l  
total 0  
-rwx---r-- 1 Admin None 0 Feb 27 21:18 file2.txt  
  
Admin@DESKTOP-OEUSPON ~/LinuxAssignment/docs  
$ cd ..  
  
Admin@DESKTOP-OEUSPON ~/LinuxAssignment  
$ ls -l  
total 0  
drwxr-xr-x 1 Admin None 0 Feb 27 21:18 docs  
  
Admin@DESKTOP-OEUSPON ~/LinuxAssignment  
$ cd ~  
  
Admin@DESKTOP-OEUSPON ~  
$ ls -l  
total 7  
drwxr-xr-x 1 Admin None 0 Feb 27 21:13 LinuxAssignment  
-rwxr-xr-x 1 Admin None 118 Feb 27 22:08 data.txt  
drwxr-xr-x 1 Admin None 0 Feb 27 19:33 docs  
-rw-r--r-- 1 Admin None 4 Feb 27 20:37 file1.txt  
-rwxr-xr-x 1 Admin None 79 Feb 27 23:04 fruit.txt  
-rw-r--r-- 1 Admin None 69 Feb 27 23:13 fruits.txt  
-rw-r--r-- 1 Admin None 43 Feb 27 23:27 input.txt  
-rwxr-xr-x 1 Admin None 49 Feb 27 22:31 numbers.txt  
-rw-r--r-- 1 Admin None 43 Feb 27 23:39 output.txt  
  
Admin@DESKTOP-OEUSPON ~  
$ |
```

g) File Searching: a. Search for all files with the extension ".txt" in the current directory and its subdirectories. b. Display lines containing a specific word in a file (provide a file name and the specific word to search).

Ans:

a. for searching files extensionwise we can use ls -X for ls -R is used to display content of subdirectory recursively.

b. to print specific word in file we can use grep command grep "is"(any word you want to search)
abc.txt

Output:

```
Admin@DESKTOP-OEUSPON ~  
$ ls -X  
LinuxAssignment  fruit.txt  file1.txt  input.txt  output.txt  
docs             data.txt  fruits.txt  numbers.txt  
  
Admin@DESKTOP-OEUSPON ~  
$ ls -R  
.:  
LinuxAssignment docs      fruit.txt  input.txt  output.txt  
data.txt        file1.txt  fruits.txt  numbers.txt  
  
./LinuxAssignment:  
docs  
  
./LinuxAssignment/docs:  
file2.txt  
  
./docs:  
file2.txt  
  
Admin@DESKTOP-OEUSPON ~  
$ cat > abc.txt  
Linux is easy open source  
  
Admin@DESKTOP-OEUSPON ~  
$ cat abc.txt  
Linux is easy open source  
  
Admin@DESKTOP-OEUSPON ~  
$ grep "is" abc.txt  
Linux is easy open source  
  
Admin@DESKTOP-OEUSPON ~  
$ grep "easy" abc.txt  
Linux is easy open source  
  
Admin@DESKTOP-OEUSPON ~  
$ |
```

h) System Information:

a. Display the current system date and time.

Ans. we can use date command

Output:

```
Admin@DESKTOP-OEUSPON ~  
$ date  
Thu Feb 27 20:24:00 IST 2025  
  
Admin@DESKTOP-OEUSPON ~  
$
```

i) Networking:

a. Display the IP address of the system. b. Ping a remote server to check connectivity (provide a remote server address to ping).

Step 1: Display the IP Address of the System

To display the IP address of the system, use the ip addr show command:

```
bash
```

```
ip addr show
```

This command will display detailed information about the system's network interfaces, including the IP addresses.

Alternatively, you can use the hostname -I command to display only the IP address:

```
bash
```

```
hostname -I
```

This will display the IP address of the system, for example:

```
192.168.1.100
```

Step 2: Ping a Remote Server

To ping a remote server, use the ping command followed by the remote server's address. Let's use Google's public DNS server (8.8.8.8) as an example:

```
ping 8.8.8.8
```

This command will send ICMP echo requests to the remote server and display the responses, indicating whether the connection is successful.

Output:

```
Admin@DESKTOP-OEUSPON ~  
$ ip addr show  
-bash: ip: command not found  
  
Admin@DESKTOP-OEUSPON ~  
$ hostname -I  
169.254.34.72 192.168.56.1 169.254.180.185 169.254.151.242 2401:4900:881d:9392:8  
a6a:f838:f839:43e 2401:4900:881d:9392:b9fa:afcf:6706:a70f 192.168.1.5 169.254.93  
.59 192.168.78.239  
  
Admin@DESKTOP-OEUSPON ~  
$ ping 8.8.8.8  
  
Pinging 8.8.8.8 with 32 bytes of data:  
Reply from 8.8.8.8: bytes=32 time=36ms TTL=59  
Reply from 8.8.8.8: bytes=32 time=42ms TTL=59  
Reply from 8.8.8.8: bytes=32 time=41ms TTL=59  
Reply from 8.8.8.8: bytes=32 time=41ms TTL=59  
  
Ping statistics for 8.8.8.8:  
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),  
Approximate round trip times in milli-seconds:  
    Minimum = 36ms, Maximum = 42ms, Average = 40ms  
  
Admin@DESKTOP-OEUSPON ~  
$
```

j) File Compression:

a. Compress the "docs" directory into a zip file. b. Extract the contents of the zip file into a new directory.

Step 1: Compress the "docs" directory into a zip file use the zip command:

```
zip -r docs.zip docs
```

This command will create a new zip file named docs.zip containing the compressed contents of the docs directory.

Step 2: Verify the zip file use the ls command:

```
ls
```

This should display the newly created docs.zip file:

```
file1.txt
```

```
docs
```

```
docs.zip
```

Step 3: Extract the contents of the zip file use the unzip command:

```
unzip docs.zip -d extracted_docs
```

This command will extract the contents of the docs.zip file into a new directory named extracted_docs.

Step 4: Verify the extracted directory use the ls command:

```
ls extracted_docs
```

This should display the extracted contents of the docs directory:

```
file2.txt
```

k) File Editing:

a. Open the "file1.txt" file in a text editor and add some text to it. b. Replace a specific word in the "file1.txt" file with another word (provide the original word and the word to replace it with).

Step 1: Open the "file1.txt" file in a text editor use the nano command:

```
nano file1.txt
```

Step 2: Add Some Text to the File

"Hello, this is some additional text."

Step 3: Replace a specific word in the file use the sed command. Let's replace the word "Hello" with "Hi":

```
sed -i 's/Hello/Hi/g' file1.txt
```

This command will replace all occurrences of the word "Hello" with "Hi" in the "file1.txt" file.

Step 4: Verify the changes use the cat command:

```
cat file1.txt
```

This should display the updated contents of the "file1.txt" file:

"Hi, World!"

This is a Linux file.

Hi, this is some additional text."

Output:

A terminal window with a black background and green text. The prompt is 'Admin@DESKTOP-OEUSPON ~'. The user enters '\$ notepad file1.txt'. The prompt changes to 'Admin@DESKTOP-OEUSPON ~'. The user enters '\$ sed -i 's/Hello/Hi/g' file1.txt'. The prompt changes to 'Admin@DESKTOP-OEUSPON ~'. The user enters '\$ cat file1.txt'. The output is '"Hi"' followed by a new line. The prompt changes to 'Admin@DESKTOP-OEUSPON ~'. The user enters '\$ |' and the cursor is on a new line.

```
Admin@DESKTOP-OEUSPON ~  
$ notepad file1.txt  
Admin@DESKTOP-OEUSPON ~  
$ sed -i 's/Hello/Hi/g' file1.txt  
Admin@DESKTOP-OEUSPON ~  
$ cat file1.txt  
"Hi"  
Admin@DESKTOP-OEUSPON ~  
$ |
```

Problem 2:

a. Suppose you have a file named "data.txt" containing important information. Display the first 10 lines of this file to quickly glance at its contents using a command.

Ans: by using head command we can print first 10 lines.

Output:

```
Admin@DESKTOP-OEUSPON ~  
$ notepad data.txt  
  
Admin@DESKTOP-OEUSPON ~  
$ cat data.txt  
hii  
hello  
my file  
source code  
command line  
readable file  
easy to understand  
execution  
extension  
linux source  
Admin@DESKTOP-OEUSPON ~  
$ head -10 data.txt  
hii  
hello  
my file  
source code  
command line  
readable file  
easy to understand  
execution  
extension  
linux source  
Admin@DESKTOP-OEUSPON ~  
$
```

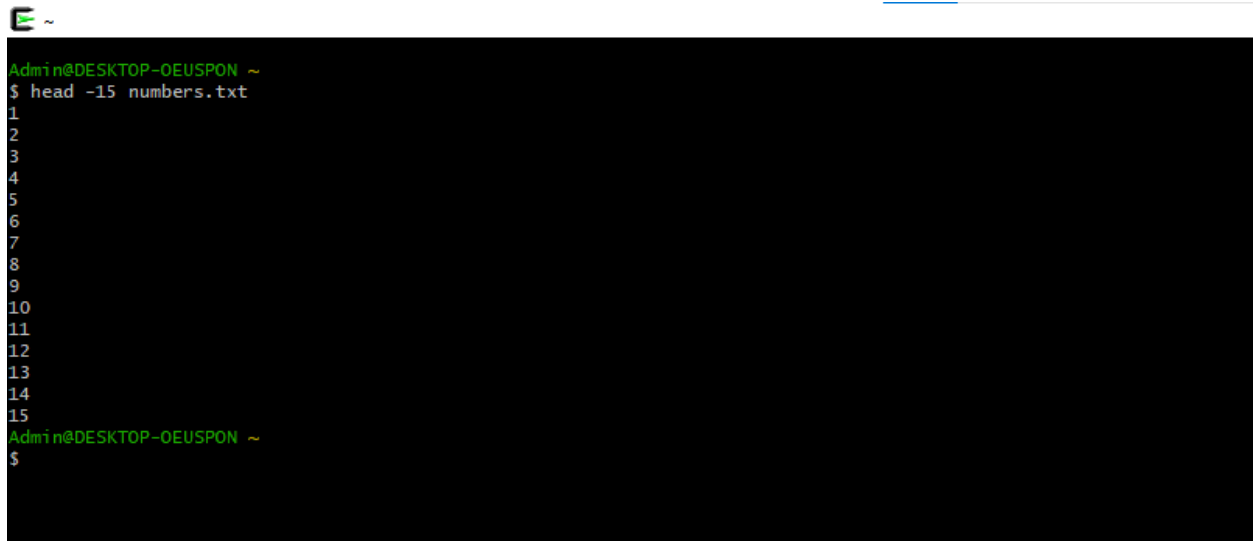

b. Now, to check the end of the file for any recent additions, display the last 5 lines of "data.txt" using another command. by using tail command we can print last n lines.(here we can print last 5 lines)

Output:

```
Admin@DESKTOP-OEUSPON ~  
$ notepad data.txt  
  
Admin@DESKTOP-OEUSPON ~  
$ cat data.txt  
hii  
hello  
my file  
source code  
command line  
readable file  
easy to understand  
execution  
extension  
linux source  
Admin@DESKTOP-OEUSPON ~  
$ head -10 data.txt  
hii  
hello  
my file  
source code  
command line  
readable file  
easy to understand  
execution  
extension  
linux source  
Admin@DESKTOP-OEUSPON ~  
$ tail -5 data.txt  
readable file  
easy to understand  
execution  
extension  
linux source  
Admin@DESKTOP-OEUSPON ~  
$
```

c. In a file named "numbers.txt," there are a series of numbers. Display the first 15 lines of this file to analyze the initial data set.

Output:

```
Admin@DESKTOP-OEUSPON ~  
$ head -15 numbers.txt  
1  
2  
3  
4  
5  
6  
7  
8  
9  
10  
11  
12  
13  
14  
15  
Admin@DESKTOP-OEUSPON ~  
$
```

d. To focus on the last few numbers of the dataset, display the last 3 lines of "numbers.txt".

Output:

```
Admin@DESKTOP-OEUSPON ~  
$ head -15 numbers.txt  
1  
2  
3  
4  
5  
6  
7  
8  
9  
10  
11  
12  
13  
14  
15  
Admin@DESKTOP-OEUSPON ~  
$ tail -3 numbers.txt  
13  
14  
15  
Admin@DESKTOP-OEUSPON ~  
$
```

e. Imagine you have a file named "input.txt" with text content. Use a command to translate all lowercase letters to uppercase in "input.txt" and save the modified text in a new file named "output.txt."

Output:

```
Admin@DESKTOP-OEUSPON ~
$ cat > input.txt
Hello
Hii
Bye
Linux Sourse
command prompt

Admin@DESKTOP-OEUSPON ~
$ sed 's/[A-Z]/ \U & g/' image.txt
sed: -e expression #1, char 16: unterminated 's' command

Admin@DESKTOP-OEUSPON ~
$ sed 's/[A-Z] / \U & g/' image.txt
sed: -e expression #1, char 17: unterminated 's' command

Admin@DESKTOP-OEUSPON ~
$ sed 's/[A-Z] / \U & g/' image.txt
sed: can't read image.txt: No such file or directory

Admin@DESKTOP-OEUSPON ~
$ sed 's/[A-Z] / \U & g/' input.txt
Hello
Hii
Bye
Linux Sourse
command prompt

Admin@DESKTOP-OEUSPON ~
$ cat input.txt | tr 'a-z' 'A-Z' > output.txt

Admin@DESKTOP-OEUSPON ~
$ cat output.txt
HELLO
HII
BYE
LINUX SOURCE
COMMAND PROMPT

Admin@DESKTOP-OEUSPON ~
$ cat input.txt | tr 'A-Z' 'a-z' > output.txt

Admin@DESKTOP-OEUSPON ~
$ cat output.txt
hello
hii
bye
linux sourse
command prompt

Admin@DESKTOP-OEUSPON ~
$ |
```

f. In a file named "duplicate.txt," there are several lines of text, some of which are duplicates. Use a command to display only the unique lines from "duplicate.txt."

Output:

g. In a file named "fruit.txt," there is a list of fruits, but some fruits are repeated. Use a command to display each unique fruit along with the count of its occurrences in "fruit.txt."

Output:

 ~

Admin@DESKTOP-OEUSPON ~

\$ cat > fruits.txt

banana

apple

pineapple

banana
